HASEEB UR RAHMAN

MERNSTACK Developer

+92 (336) 786-2574 haseebpirhar@gmail.com Linkedin Github Lahore, PK

SUMMARY

A results-driven **Full-Stack** Developer with **2 years** of experience building scalable **web applications**. Specialized in **Next.js, MERN Stack, and TypeScript**, with strong expertise in developing high-performance, user-focused solutions across both frontend and backend.
Experienced in designing and implementing end-to-end applications, integrating APIs, and **optimizing** application performance. Proven ability to deliver **production-ready** solutions, contribute to complex projects, and collaborate effectively within cross-functional teams.
Recognized for strong **problem-solving** skills, adaptability, and a proactive approach to modern development practices in fast-paced environments.

EXPERIENCE

MERNStack Developer

INVOSQUARE

04/2026 Present Lahore, PK

- Led design and development of scalable web applications using Next, React, and Node.js with Express.
- Designed and optimized MongoDB for performance and security.
- Built and maintained RESTful APIs and microservices architecture, improving modularity and scalability.
- Collaborated with stakeholders and created clear technical documentation to support knowledge transfer.

Nodejs Backend

HasbiSoft

03/2024 04/2026 Lahore, Pakistan

- Developed responsive web applications using HTML, CSS, JavaScript, and React.
- Integrated RESTful APIs and managed backend services using Node.js and Express.
- Improved app performance by optimizing front-end code and refactoring bottlenecks.
- Ensured application security using JWT and OAuth for user authentication and authorization.
- Managed version control using Git and GitHub.

EDUCATION

Bachelor of Science in Information Technology

Islamia University Bawalpur *continue*

2026 Lahore, PK

PROJECTS

Restaurant Management System

- Developed a full-stack restaurant web application using React, Node.js, Express, and MongoDB, enabling menu management, order placement, and customer interactions.
- Designed and integrated RESTful APIs for orders, payments, and user management, ensuring real-time updates and seamless frontend-backend communication.

YallahNshoof(Backend)

- Developed backend services for a marketplace application using Node.js, Express, and MongoDB, supporting buying, selling, and renting workflows.
- Implemented APIs for real-time messaging, user management, and third-party integrations, ensuring smooth and scalable system performance..

PetzApp(Backend)

- Built RESTful backend APIs using Node.js, Express, TypeScript, and MongoDB, implementing JWT authentication, OTP verification, and user account management.
- Developed scalable backend modules for pet profiles, posts, media uploads, likes, reports, and notifications with optimized database schemas.

LoopedIn(Backend)

- Developed a scalable backend system using Node.js, Express, and MongoDB, implementing secure authentication and cloud file storage with AWS S3.
- Designed and optimized APIs for users, posts, comments, likes, and reporting, improving performance through efficient queries and middleware.

INTERESTS

Coding and Software Development

Deeply passionate about creating innovative software solutions that improve life and enhance business operations.

System Architecture Design

Interest in developing efficient, future-ready architectures that maximize operational efficiency.

Agile Process Improvement

Driven by the challenge of optimizing agile methodologies to enhance team productivity and software quality.

SKILLS

React Next.js HTML5 CSS3 TypeScript Github Git Tailwind Bootstrap Oauth Redux Node.js Express.js MySQL JavaScript AWS Zustand REST APIs MongoDB socket.io Context API Web Sockets Postman

LANGUAGES

English (Fluent)
Urdu (Native)

Teilim

- Developed a Node.js backend using TypeScript and MongoDB with JWT authentication and **OTP verification**, providing RESTful APIs for user management, **prayer requests**, and dashboard analytics.
- Integrated **SendGrid/Gmail** for email services, Multer and **AWS S3** for file uploads, and implemented a modular architecture with controllers, services, and middleware for scalability and maintainability.

Inclusive Living (Backend)

- **Developed backend services using Node.js, Express, and MongoDB for a survey-based platform focused on inclusive living, enabling users to submit and manage accessibility-related data.**
- **Designed and implemented RESTful APIs for survey creation, response collection, and data analysis, ensuring efficient data handling and scalable performance.**
